

Output Plugin: Standard output (stdout)

This plugin writes the result of Logagent parser to the standard output stream (stdout) and is activated by default.

Following message formats are supported: - Line delimited JSON (default) - Pretty JSON (-pretty command line flag) - YAML (-yaml command-line flag)

Configuration

```
input:
  stdin: true
  files:
    - /var/log/**/*.*log

output:
  stdout: yaml
  # use 'pretty' for pretty json and 'ldjson' for line delimited json
  # stdout: pretty
  # stdout: ldjson
```

Start logagent

```
logagent --config stdout.yaml
```

Command-line usage

```
cat test.log | logagent --yaml
cat test.log | logagent --pretty
cat test.log | logagent --ldjson
```
