

Plugin: Apache Kafka Output

Acts as producer to ingest parsed messages to Apache Kafka topics. This plugin depends on two additional node modules, which should be installed first:

```
npm i -g kafka-node
npm i -g kafka-stream
```

Configuration

```
# Global options
options:
  includeOriginalLine: false

input:
  stdin: true

output:
  kafka:
    module: output-kafka
    kafkaHost: localhost
    topic: test
  #Configuration for consider message as  acknowledged acknowledged
  # 0 = No ack required
  # 1 = Leader ack required
  # -1 All in sync replicas ack required
  requireAcks: 1
  sslEnable: false
  #For init sslOptions please refer to to https://nodejs.org/api/tls.html
  sslOptions:
    - rejectUnauthorized: false

Start logagent

logagent --config kafka-input.yaml
```
