

## Input Plugin: Command

Input plugin to schedule commands and stream the output into Logagent. Similar to 'tail -n 10 test.log | logagent -yaml'.

Applications:

- collect output from command line tools
  - collect journald logs via `journalctl`
  - collect information via http with `curl` or `wget`

## Configuration

```
input:
  journald-json:
    module: command
    command: journalctl -o json -f
    sourceName: journald
    # time in seconds to repeat the command
    restart: -1
```

```
output:
  es-local:
    module: elasticsearch
    url: http://localhost:9200
    index: journald_logs
```

Start Logagent

```
logagent --config myconfig.yml
```
