

Input Plugin: Cloud Foundry

Receives logs from Cloud Foundry log drains via HTTP.

Please note:

To ship Cloud Foundry application logs to Logstash, we recommend to stream Cloud Foundry application logs directly to Logstash

Configuration

```
input:
  # Receive data from Cloud Foundry log drains via http
  cloudFoundry:
    port: 8888
```

```
output:
  stdout: yml
```

Start Logagent

```
logagent --config myconfig.yml
```
