#### Overview

The client for "SPM for MongoDB" is an open-source mongodb monitoring agent that collects MongoDB metrics and sends them to SPM. It is available as npm package (see Installation & Configuration section below).

In addition to collecting MongoDB metrics, you can send Custom Metrics, such as the number of concurrent users, the number of items placed in a shopping cart, or any other kind of business transaction or KPI.

## **Installation and Configuration**

- 1. Create an SPM App of type "MongoDB" in SPM
- 2. Click the "Install Monitor" button and follow the customized instructions for the created SPM App (basically how to install the NPM package and configure the SPM App Token)

# Troubleshooting and "How To"

#### Generate diagnostics file for Sematext Support

If you are not seeing some or all MongoDB metrics, you can create a "diagnostics dump" and contact us via chat or email. To create the diagnostics dump just run the following in your application directory:

#### spm-client-diagnostics

The output of this script points to the ZIP file and shows the Sematext Support email address to which the ZIP file should be sent.

#### Using SPM for MongoDB behind Firewalls / Proxy servers

By default data is transmitted to SPM via HTTPS. If no direct connection is possible, a proxy server can be used by setting the environment variable HTTPS\_PROXY=https://your-proxy.

#### Installation of native modules on Windows

The native modules are automatically compiled during "npm install" (using node-gyp). On Windows the required build tools like python or C++ compilers are typically not installed by default.

In this case please check https://github.com/TooTallNate/node-gyp for details about the required compiler and build tools.

## Upgrading to a new node.js version

If you switch the node.js version (e.g. from 0.12 to 4.x), the spm-agent-mongodb package will need to be installed again (due to the fact that included native modules may change from version to version). After the version change please run a fresh installation "npm i spm-agent-mongodb -g"

## Upgrading to the latest version of spm-agent-mongodb

To use the latest version of spm-agent-mongodb we recommend you install/upgrade using:

npm i spm-agent-mongodb@latest -g

## Github Repository

The latest version and related information is available in the Github repository sematext/spm-agent-mongodb

# Integration

• Instructions: https://apps.sematext.com/ui/howto/MongoDB/overview
