Run Logagent as Heroku Log Drain

You can forward your Heroku logs to Logsene using Heroku Log Drain like this:

heroku drain:add --app HerokuAppName URL

Here are the steps:

To ship your Heroku logs to Logsene or Elasticsearch deploy Logagent on Heroku. It will act as an HTTPS log drain.

- 1. Get a free account apps.sematext.com
- 2. Create a Logsene App to obtain the Logsene Token
- 3. Deploy logagent-js to Heroku using the Deploy to Heroku button

... or use the following commands:

```
git clone https://github.com/sematext/logagent-js.git
cd logagent-js
heroku login
heroku create
git push heroku master
```

4. Add the log drain using the URL format like https://loggerAppName.herokuapps.com/LOGSENE_TOKI Use the following command to grab the dynamically assigned name from "heroku create" command.

```
heroku drains:add --app YOUR_HEROKU_MAIN_APPLICATION `heroku info -s | grep web-url | cut
Now you can see your logs in Logsene, define Alert Queries or use Kibana for
```

Now you can see your logs in Logsene, define Alert Queries or use Kibana for Dashboards.

 $5.\ \,$ Scale Logagent service on Heroku

To handle high log volume, scale Logagent on demand using

export LOGSENE_TOKEN=YOUR_LOGSENE_TOKEN

heroku scale web=3
