Essentials

We support receiving JSON messages from any application, as long as they they contain a valid token. The destination host is **logsene-receiver-syslog.sematext.com** and the port we use is 12201, both UDP and TCP.

Example

A quick way to ship messages via TCP syslog is with netcat:

```
echo '{"logsene-app-token":"LOGSENE_APP_TOKEN_GOES_HERE", "message":"Hello, Logsene!"}' | nc l
```
