Installation on Windows

1) Download and install node

Download nodejs from nodejs.org and execute the installer.

2) Install Logagent and Windows event plugin

```
npm i -g @sematext/logagent
npm i -g logagent-input-windows-events
# run logagent windows version
logagent-windows --help
```

3) Optional service installer

Create a configuration file for Logagent in

`%ProgramData%\Sematext\logagent.conf`

In case you want to store the configuration file in a different directory, enter the new location in the registry:

`HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\Session Manager\Environment\LOGAGENT_CON`

Example config file to collect Windows events to Elasticsearch:

```
options:
  includeOriginalLine: false
  suppress: true

input:
  windowsEvent:
    module: logagent-input-windows-events
    # query events every 10 seconds
    interval: 10
    maxEvents: 1000

output:
  local-es:
    module: elasticsearch
    url: http://localhost:9200
    index: windows_events
```

Run service installer:

`logagent-windows -install`

To uninstall the service run

`logagent-windows -uninstall`
